

## **Incorporating Natural Energy Medicine into your Practice.**

### **Custom Protocols for Most Conditions**

(Part 5)

Mk III Custom Protocol list currently has over 90 conditions listed. Each condition will list nutrition recommendations from Standard Process Labs. Use same or equivalent nutrients for optimum results. Next each condition will list the recommended laser therapy programs in the order of priority. Utilize any or all until optimal results are obtained.

This list can also be utilized for just the nutritional component for different conditions when needed. These nutritional recommendations were created by Mark Anderson, one of the leading instructors and researchers on nutrition in the country.

This custom protocol list was created for any care giver to aid with the recommendations of conditions that are not clearly described in the Treatment Guide, or when the physician would like some quick nutritional guidance for the therapy program.

There are two Mk III protocol lists, one for the Home therapy system and one for the Mk III Processional therapy systems. These are found on the website and are kept up to date with the latest new programs.

This custom therapy list will help remove the stress for new patients with really strange conditions and believe me they will be coming once the word gets out that you like strange patients and usually get positive results with them. So many times we drive away patients that we really don't want even before they come in with our mind and mental attitude. Patients that are hard to figure out or that take too much of your time. Needy patients that are needy because no one has ever helped them before. Cranky patients because they have been in pain for years with no relief. Even really strange patients because they are so high on narcotic pain killers that they can't even function normally. No one wants these patients for the obvious reasons but you will begin to love them as you are able to help them without being stressed in the process. Even if you only help a small percentage of these patients you will still form an excellent reputation for trying.
