

Incorporating Natural Energy Medicine into your Practice. Fibromyalgia

(Part 21)

Even though Fibromyalgia is not as popular as it was a few years ago the condition is still prevalent because the actual cause has never been found or corrected. The last I heard Fibromyalgia was a chronic systemic inflammation of soft tissue. I have never heard of an actual cause or a viable treatment for this condition that was less dangerous than the condition. I do know that the stats are rather confusing since they report about 2 million new cases a year and still report 6 million cases in total. Since it has been around for about 30 years or so and there is no known cure they must be using this new math that I have heard of to come up with these figures.

How many of your patients suffer from this? They may not be calling it the same now but the symptoms are still the same. And based on symptoms and history this is an autoimmune reaction to soft tissue. Besides lethal doses of steroids, only Natural Energy Medicine offers another form of effective therapy.

Keep in mind that many of these cases could be Lyme, West Nile or other diseases, but without the autoimmune therapy they will not fully recover. However, does it matter what the cause is or if anyone actually even knows the cause? All the patient needs to know is that you can fix it or at least significantly reduce the symptoms of Fibromyalgia and almost always prevent the disease from progressing.

You will never run out of Fibromyalgia patients so if you obtain positive results on the first few patients you will be busy the rest of your life.
